Eisenhower Matrix

	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● User login with username and password ● Local file-based storage that stores current dining dollars ● User inputs to subtract dining dollars and program updates the account balance ● calculate weekly budget by dividing account balance with weeks left in the semester (resets weekly budget Monday 12am)	**Schedule - (For V2.0+)** ● Make graphical front end in java using Java Swing ● Allow users to set certain weeks where they want to allocate more or less dining dollars ● User preference setting to show warning when more than a certain amount of the weekly budget has been spent too early in the week
Not Important	**Delegate - (Use a library)** ● Date handling with java.util.Date to get the time when the account is created and see how much time is left in the semester ● Read and write files with the Java I/O to load and update the user's file ● Folder checks and creation using File.mkdirs()	**Delete - (Cut it)** ● Scrape retail dining menus to show user what they can buy with their budget ● Recommendation system to give personalized suggestions of what to buy based on patterns of what the user likes to purchase ● Location tracking to see what retail dining spots are nearby
